## Sod

Water, Water, Water, Water, and  
more Water!

Green Velvet  
Kentucky Bluegrass

Give your newly installed sod at least one inch of water with on half hour after installation. Water daily, or more often, keeping sod moist until it is firmly rooted in about two weeks. Then less frequent and deeper watering should begin. Weather conditions will dictate the amount and frequency of watering. Be certain that your new sod has enough moisture to survive hot, dry or windy periods. Water areas near buildings more often where reflected heat dries the sod.
